

Data Governance: Best Practices for Getting Started

Bobbi Caggianelli

Agenda

- ❖ There is a need for Data Governance
- ❖ Where to Start
- ❖ Culture Change
- ❖ Helpful Resources

Bobbi Caggianelli, MSba

- ★ MS in Business Analytics
- ★ “A Practitioner’s Guide to Data Governance” case study
- ★ Security Benefit led the Data Science & Governance Team
- ★ Master black belt in Six Sigma
- ★ Director of Sales Engineering Program, East Coast

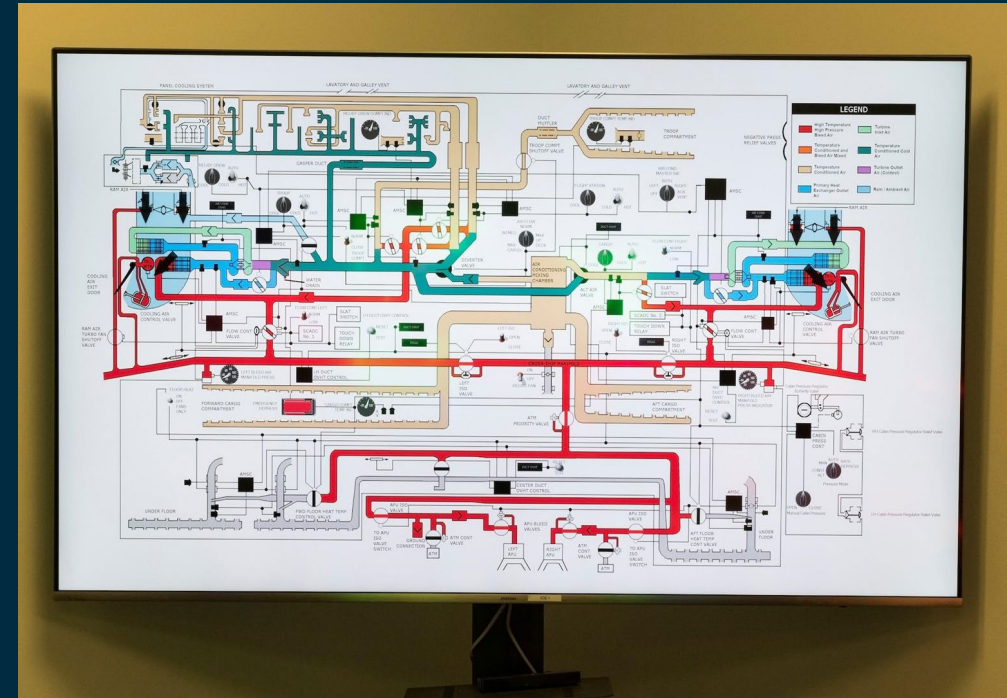

The background is a teal-tinted image of an office workspace. It features a laptop on the left, a hand pointing at a document in the center, and another hand holding a pen over a document on the right. Dotted white lines form a circular path at the top and a curved path at the bottom. The text 'We need to do data governance!' is centered in a large, bold, white font.

We need to do data governance!

Where do we start?

Assess Current State

- Gather existing maps of where your data lives (or start one)
- Meet with department SME to verify the map
- Find out who is using the data
- Find out who is managing the data (if anyone)
- Find out if you have any self-governance
- Find out if you have any quality checks
- Find out how vendor data is managed

Gain Support

Top Down

- Equate your data strategy with corporate level goals
- Try to quantify the cost of data wrangling and the cost of bad data
- Build business and technical sponsorship

Bottom Up

- Discover the pain points bad data creates for each business unit
- Discuss how data governance can address those pain points
- Make it clear the goal is to make finding and using data easier

Word Choice Matters!

Understand the culture of your organization

Sometimes the word *Governance*
=
Expensive Overhead to members of leadership

Consider calling it:

- Data Strategy
- Data Usage
- Data Enablement

Start with the Data!

Data stewards defining terms and compliance teams writing policies do not add value unless those assets are connected to a physical data element.

The idea of *Data Governance* is to ENRICH your physical metadata with business and compliance context.

Quick Wins

It is important to **show a value quickly as you build the governance practice**. Some areas where you can gain quick wins:

- **Start with ingesting your physical metadata to create your automated Data Dictionary.** Many companies are tracking this in Excel spreadsheets. This enables you to have accurate data that STAYS accurate through ingestion refreshes.
- **Complete Lineage stitching** next to create automated, exportable data flows to understand how data flows through your systems.
- **Review your data flows** to find duplicative storage of the same data. Eliminating this can reduce storage costs.
- **Ingest the metadata from your BI tool** to build your automated report catalog. This will enable elimination of duplicate reports and prevent creation of duplicate reports, saving resource time, which equates to cost savings.

Creating Cultural Change

- Add Data Governance requirements to Change Control and Go Live checklists.
 - Are new feeds mapped?
 - Are new fields defined?
- Add Data Governance tasks to project plans with defined timelines.
- Include funds for Data Governance work in project budgets.
- Make sure everyone understands this is part of the company culture and not a project with an end date.
- Gamify governance with awards for most proposed terms or most terms mapped to data assets.

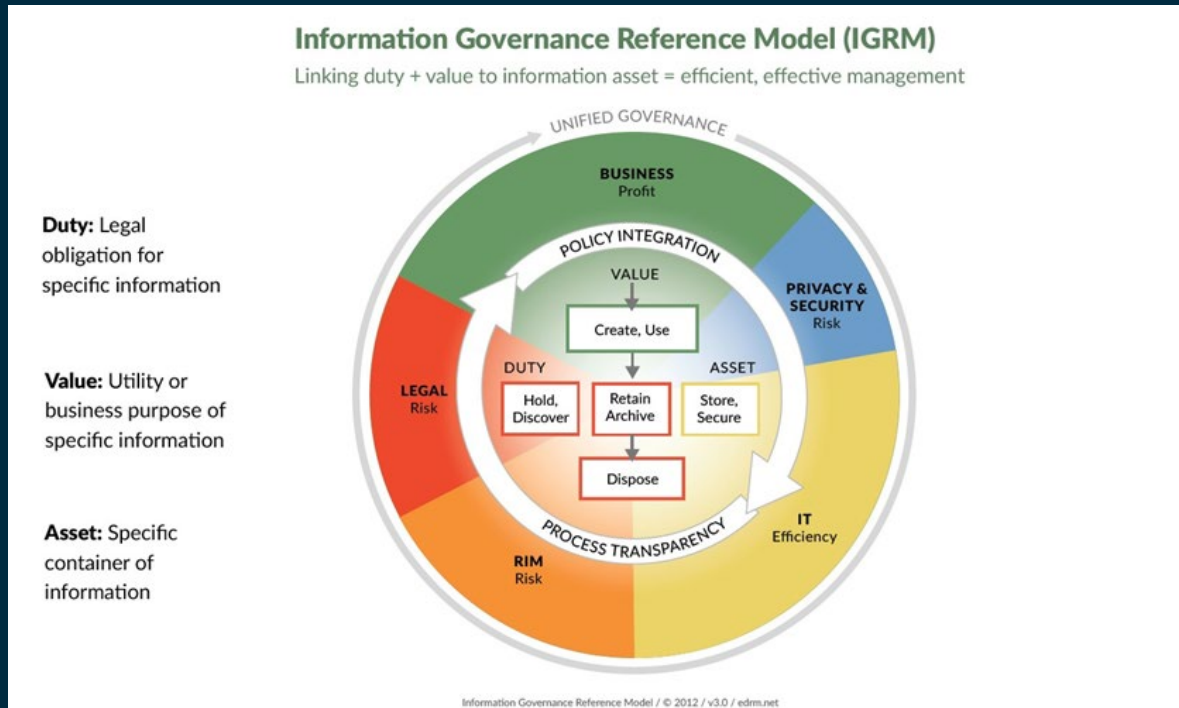

Collibra Accelerators

Collibra provides numerous capabilities that can accelerate your time to value in your governance practice.

- **Automated Business and Technical Lineage**
- **Profiling and Data Classification with Machine Learning**
- **Adaptive Rules for Data Quality**
- **Automated Report Catalog with Lineage**
- **In App Workflows**
- **Bi-directional integration with ticketing systems**
